

U.S. Cellular expands network in Moultonborough area

MOULTONBOROUGH —U.S. Cellular recently completed the conversion of an additional cell site in Moultonborough to improve call quality for its customers. The site will increase U.S. Cellular’s coverage and network capacity around Moultonborough and provide service along Route 25. The site complements U.S. Cellular’s statewide network of more than 135 towers.

“Your cell phone is your lifeline to the people who are most important to you,” said Eric Conlon, director of sales for U.S. Cellular in New England. “We’re here to keep you connected.”

U.S. Cellular has a team of network engineers who drive all over the coverage area to test signal strength

and call quality. The company also listens to customer feedback to determine the best locations for new cell sites. “This part of New Hampshire lacked quality wireless service. As a result, we identified the community as a priority. People everywhere depend on their cell phones to meet critical safety and business needs,” added Conlon.

U.S. Cellular has led the effort to preserve federal support for rural wireless development through Connecting Rural America (www.connectingruralamerica.org), a grassroots coalition of concerned citizens, community leaders and elected officials working for equality in wireless telecommunications. Its goal

is to provide rural communities with the same access to technology as their urban counterparts.

The 9,000 associates of U.S. Cellular believe a wireless phone enhances people’s lives and a wireless company should be in the business of bringing people together. U.S. Cellular has a wide range of monthly plans, including those with unlimited nationwide calling, unlimited free incoming calls and options to prepay. Based in Chicago, U.S. Cellular is the nation’s fifth-largest full-service wireless carrier, serving 6.2 million customers across the country.
